Dear Mrs X, Dear Mr X

I would like to present 5 reasons why you should consider me as a perfect candidate for the position as **"Backend Developer PHP (w/m) [EN]"**

1. I have over 15 years of experience in designing and creating web applications using PHP.
2. In my professional work I used several frameworks, such as: Symfony, Silex, Zend and I've also developed my own.
3. I always provide the best quality, scalable, tested and bug-free application codes.
4. I designed and optimized databases containing millions of records.
5. I have very good recommendations from most of my previous jobs.

As a Software Developer in Auto1 I work on creating a huge auction system for cars selling system. I am part of a team, which is responsible for internal applications used by thousands of company employees, placed in many countries around the world. My solutions, such as the automation of classified adverts exports or integration our applications with Google authorisation services, have improved capabilities of evaluations and sales of the company's products.

As IT Manager at Gandalf in Poland, I coordinated the work and operation of all technological processes. I introduced innovative changes, including software based on my own framework, which allow us to increase traffic in the online store to about 8.5M views per month, at the same time reducing the number of servers to 3 and decrease load on these machines through fast page generation time. I optimised our expenses maintaining flexibility of codes and scalability of project as well as keeping very low costs of infrastructure and need of resources in IT department.

In previous companies I was involved in design of extensive B2B and B2E systems what helped them in dynamic development of their products and services.

What shall I do for your company?

Sincerely
Jakub Luczynski
